Analytical professional with a solid foundation in data exploration and visualization techniques gained through hands-on projects that involve web scraping, machine learning models and interactive dashboards. Passionate about bridging the gap between technical data engineering and impactful, real-world communication.

TECHNICAL SKILLS

Languages: Python, SQL

Data Science & Machine Learning: Scikit-Learn, Pandas, NumPy, Seaborn, Matplotlib, Plotly

Web Scraping: Requests, BeautifulSoup

Visualization & BI: Streamlit, Power BI, Matplotlib, Plotly, Looker Studio

Data Management: Data Cleaning, Data Wrangling, ETL Pipelines, Excel

Tools & Platforms: Git, GitHub, Jupyter Notebook, VS Code

EXPERIENCE

Operations & Data Assistant | Aqua Gardens Ltd, Abuja

May 2022 – Nov 2022

- Maintained structured daily datasets across 10–30 fish tanks (mortality rates, feed consumption, sales) used directly by the Financial Manager for operational decisions.
- Managed feed inventory records, enabling accurate stock tracking and reducing risk of feed shortages across a multi-tank commercial operation.
- Gained exposure to operational data collection, manual data entry workflows, and inventory management in a production environment forming the practical foundation for a transition into data analytics.

PROJECTS

[Abuja Rental Prediction & Intelligence Dashboard](#) — Python, BeautifulSoup, Requests, Pandas, NumPy, Plotly, Streamlit

- Engineered an end-to-end data pipeline that scraped 2,000–10,000 residential property listings from major Nigerian real estate platforms (Jiji, PropertyPro.ng, Nigeria Property Centre) using Requests and BeautifulSoup.
- Cleaned and transformed raw listing data to produce a reliable analytical dataset with Pandas, regex and NumPy.
- Trained and evaluated a Random Forest regression model achieving an R^2 score of 0.761 to estimate fair market rent by district, property type, and bedroom count across the Abuja Municipal Area Council (AMAC).
- Built a multi-page interactive Streamlit dashboard featuring district-level filters, price-range selectors and downloadable charts to bring market transparency to renters and investors.

[Compound Interest Calculator](#) — Python, Streamlit, Pandas, Plotly

- Developed a responsive financial web application leveraging Streamlit's reactive state system to compare two distinct investment scenarios side-by-side.
- Designed an accessible user interface complete with an interactive Plotly growth line chart, an annual interest histogram, and a built-in feature for raw data CSV export.

[Tip Prediction Using ML Models](#) — Python, Scikit-Learn, Pandas, Seaborn, Matplotlib, Jupyter Notebook

- Modeled consumer tipping behaviour to predict tip amounts based on total bill, party size and demographic features.
- Trained and compared 5 distinct machine learning models, implementing Gradient Boosting with GridSearchCV hyperparameter tuning to optimize performance and find the best-fit model.

EDUCATION & CERTIFICATIONS

- **B.Sc. Agriculture and Animal Science (Joint Honours)** University of Abuja— Abuja, Nigeria *Graduated 2025*
- **IBM Data Science Professional Certificate** · IBM / Coursera · Incl. Applied Data Science Capstone *2024*
- **Journey Into Data Science with Python — Intermediate Path** · CodeSignal *2025*
- **Unlocking data insights with PostgreSQL** · CodeSignal *2025*
